

JIAN MA

FULL-STACK SOFTWARE ENGINEER

max.jian.ma@gmail.com · 214-796-0660 · Austin, TX · github.com/Sparta-FrontEnd

SUMMARY

Software engineer with 5+ years building enterprise systems and full-stack web applications. Spent nearly three years with Apple Online Store's Content team on the internal platform that manages and publishes content across global storefronts — a highly customized enterprise equivalent of Shopify or WordPress — working inside a mature, large-scale system where reliability, maintainability, and collaboration were critical. Now co-founder of Popping Art Design, a two-person studio where a UI/UX partner owns design and engineering runs from technical planning and architecture through implementation and deployment. Combines enterprise engineering discipline with end-to-end product ownership.

TECHNICAL SKILLS

Languages	Java · TypeScript · C# / .NET · Python · SQL · HTML / CSS
Frontend	Next.js · React · Angular · Tailwind CSS · GSAP · Shopify · WordPress
Backend	Spring Boot · Spring MVC · Spring AOP · Hibernate · .NET · Node.js · REST APIs · Microservices
Distributed & Caching	Kafka · ZooKeeper · Redis · distributed locking · concurrency control
Data	MySQL · PostgreSQL · Oracle · Cassandra · MongoDB · Solr · data and state-machine modeling
Cloud & DevOps	AWS (EC2, ECS) · GCP · Docker · Kubernetes · Jenkins · Maven · CI/CD · Git · Splunk
AI Systems	Claude API · DeepSeek · RAG · vector databases · multi-agent validation pipelines

EXPERIENCE

Popping Art Design | Co-Founder & Engineering Lead

Apr. 2025 – Present

Two-person studio: a UI/UX partner owns design; sole owner of engineering from architecture through deployment.

- **Built a multi-store ERP end to end** (Java, Spring Boot, Next.js, Tailwind, AWS) for a three-location business — scheduling, inventory, and cross-store reporting, with pessimistic locking to keep concurrent staff edits consistent and Redis caching on hot read paths.
- **Delivered an operations dashboard and reporting platform** (C# / .NET backend, Next.js frontend) for a telecom device-repair enterprise, polling hundreds of metrics and pairing it with a dual-agent Claude pipeline — a generator constrained by encoded business rules plus an independent validator — that cut report turnaround from 2+ hours to one click.
- **Built internal management systems clients operate themselves** — StarlinkMortgage's platform for customer records, inquiry tracking, notifications, and quote management, plus the studio's own dashboard for project, client, and cash-flow management.
- **Deployed an internal RAG service on AWS** over a ~400-page corpus, indexed into a vector store and queried through DeepSeek for sub-minute answers inside quoting and support workflows.
- **Shipped 15+ client web platforms across industries** — GREFFEE Mold (industrial manufacturing), Shanghai Beifang Group (supply-chain logistics), Talent Group (staffing), and Shopify storefronts for Cozy Nook, One Bowl Wonder, RestEase, Spicy Moon, and fitn — translating design comps into responsive, performance-tuned, client-maintainable sites on one to two week cycles.

Apple — Online Store | Software Engineer (Onsite Vendor)

Mar. 2022 – Feb. 2025

Content platform team (~20 engineers): the internal CMS behind global storefront publishing.

- **Owned areas of the content ingestion and publishing path** — creation, scheduling, versioning, multi-region publish, and rollback for storefront content across global markets.
- **Rebuilt Kafka consumption from framework-managed push to manual polling** for real backpressure, and added ZooKeeper ephemeral-sequential locking keyed by content ID to guarantee single execution per task across restarts — duplicate processing events down about 95%, peak server provisioning down roughly 40%.
- **Diagnosed systemic schema drift** behind incorrect rollback states across 12+ tables, redesigned the state tables with explicit rollback field mappings, and migrated 30+ inconsistent transitions — removing the entire defect class.

Soonest Express Inc | Software Engineer

Feb. 2021 – Dec. 2021

Publicly listed multinational freight forwarder; five-person IT team modernizing internal operations.

- **Built the warehouse and booking platform** on Spring Boot and React — barcode-scanner events driving warehouse state from inbound through outbound, and booking flows linked into accounting so orders produced postable charge lines — plus CI/CD from scratch.

Bays & Gulfs LLC | Junior Software Engineer

Dec. 2019 – Dec. 2020

- Built Spring Boot REST APIs and product-catalog features for a custom e-commerce platform.

EDUCATION

The University of Texas at Arlington · B.S. Computer Science

Sep. 2017 – Dec. 2020
